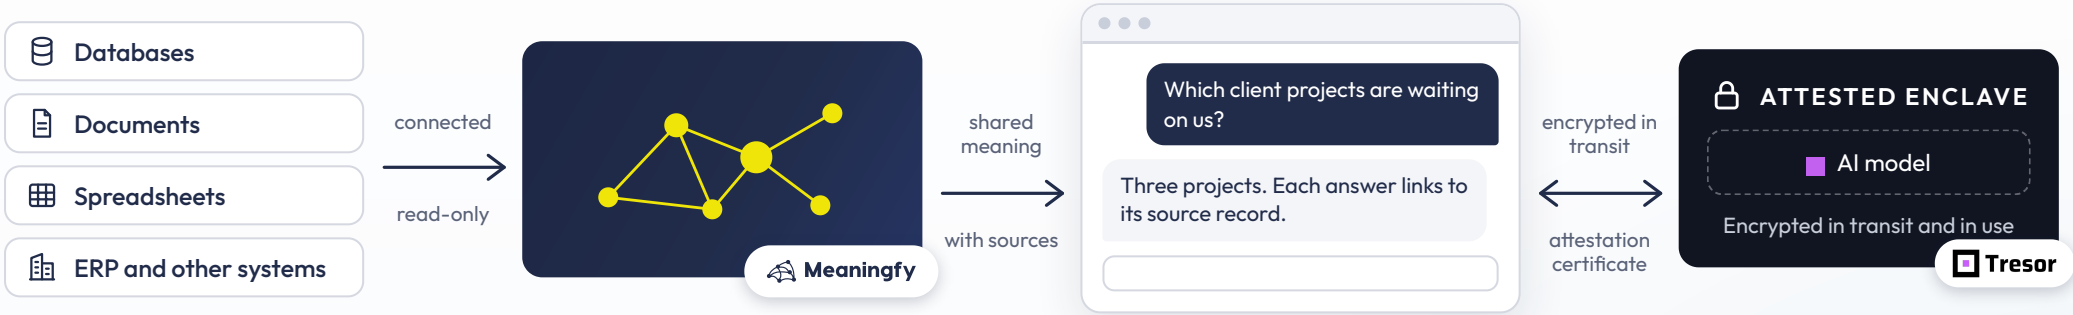
CONFIDENTIAL AI ON YOUR OWN DATA

Meaningfy | Tresor

Your team asks your company's data. Not even Tresor can see it.

Today the answers sit in five systems and one person's head. Meaningfy connects them; Tresor runs the AI model in an attested enclave.

HOW IT WORKS



Your existing systems

Nothing to replace or migrate.

Semantic layer and enterprise memory

One set of business definitions over all your sources, so "client" or "due" means the same everywhere.

AI Workspace

Your team's AI interface: chat, documents, agents.

Confidential AI

The model runs in an attested enclave, with a report you can verify: not even Tresor can see your data.

HOW WE START

1 · 1–2 DAYS

First AI Project Workshop

Fixed price €6,000, at your office, report within a week. Free if you go on to the Proof of Value.

2 · ONE USE CASE

Proof of Value

One use case on one dataset: a working version on your real data, measured against success criteria agreed in the workshop.

3 · ACROSS THE TEAM

Rollout

More sources, more people, the same shared meaning and the same confidentiality.

WHO DOES WHAT

Meaningfy

Semantic data specialists: we make company data understandable to people and AI.

Tresor

Confidential AI built in Luxembourg; the model runs inside an attested enclave.

€ **Luxembourg SMEs:** projects of €3,000 to €25,000 may qualify for up to 70% co-funding under the SME Package (AI or Digital). We help you check eligibility.

Book a 30-minute call: bring the three tasks that eat your team's week.
